

MES 503 Lab 1

Kayla Blincow, PhD

Repeat after me...

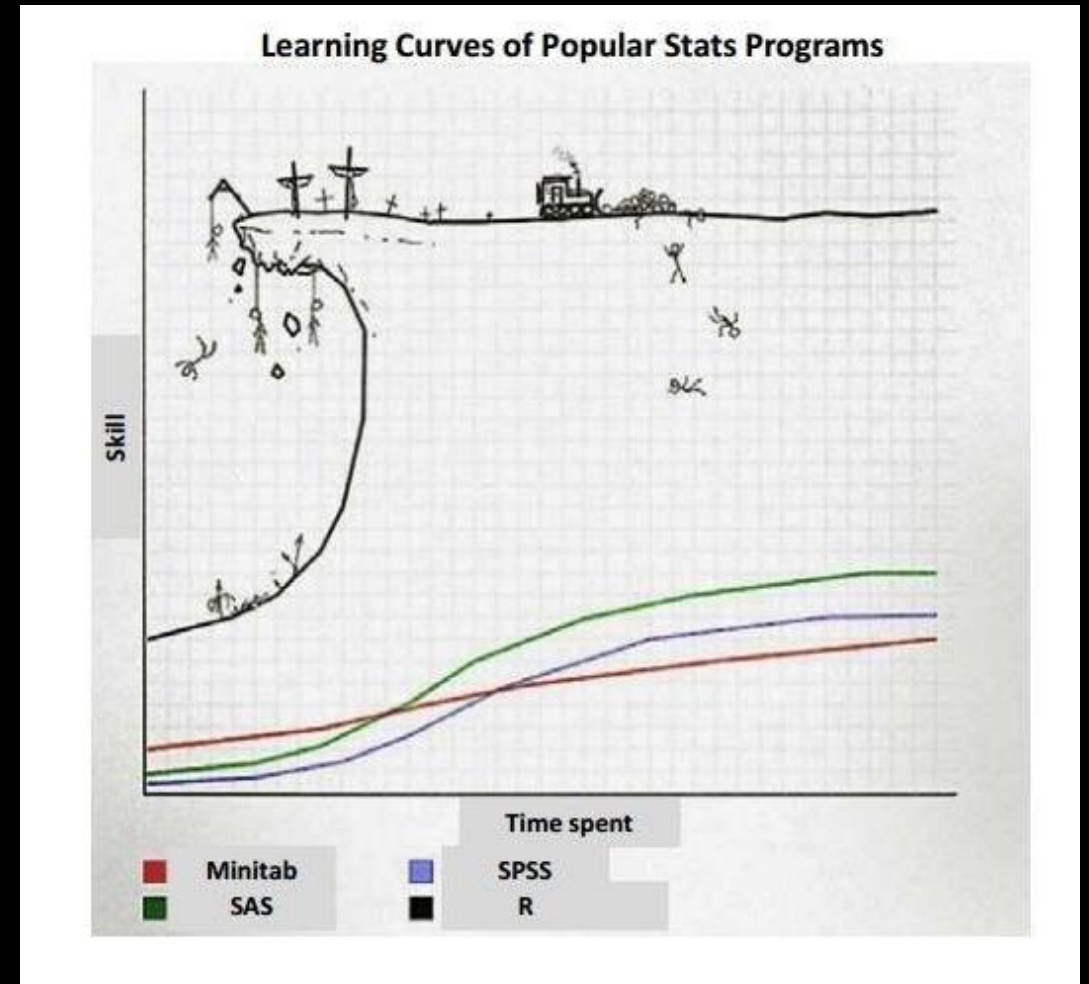

I am a student.

I am still learning and that is okay.

My background is different than everyone else's, therefore it makes no sense to compare my abilities or progress to anybody else.

My Philosophy on Coding

- In this class, we are a team
 - Don't be afraid to say I don't know
- You will almost never code without the internet to help you
 - Use Google!
 - Use ChatGPT (but **carefully**)
 - Use each other
- Coding is a language; the best way to learn it is to use it.

Typical Lab Structure

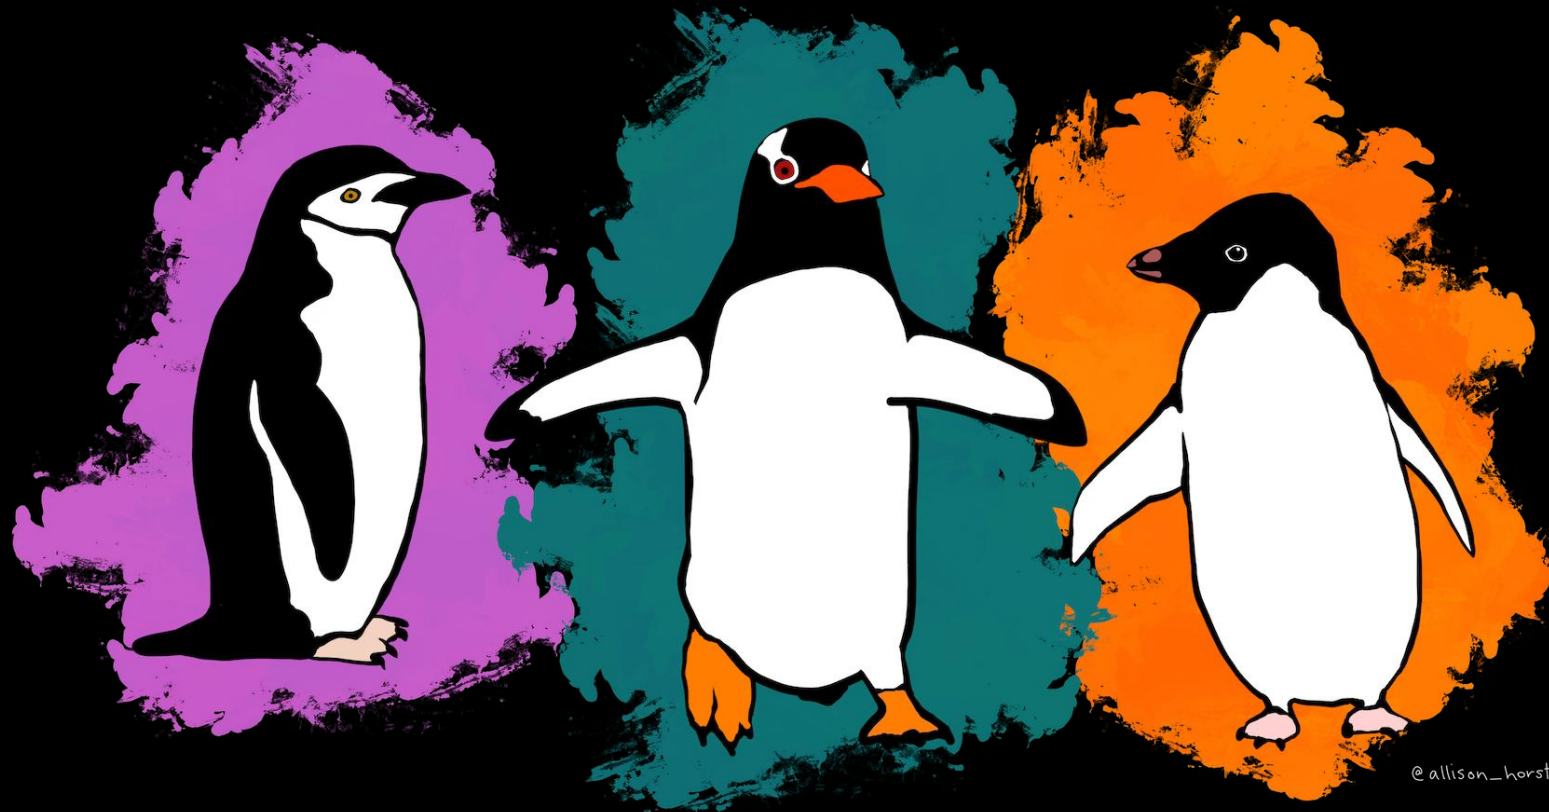

- Materials shared on Brightspace
- ~ 1 hour analysis topic
- ~ 1 hour pure coding skills
- Exercise combining the two

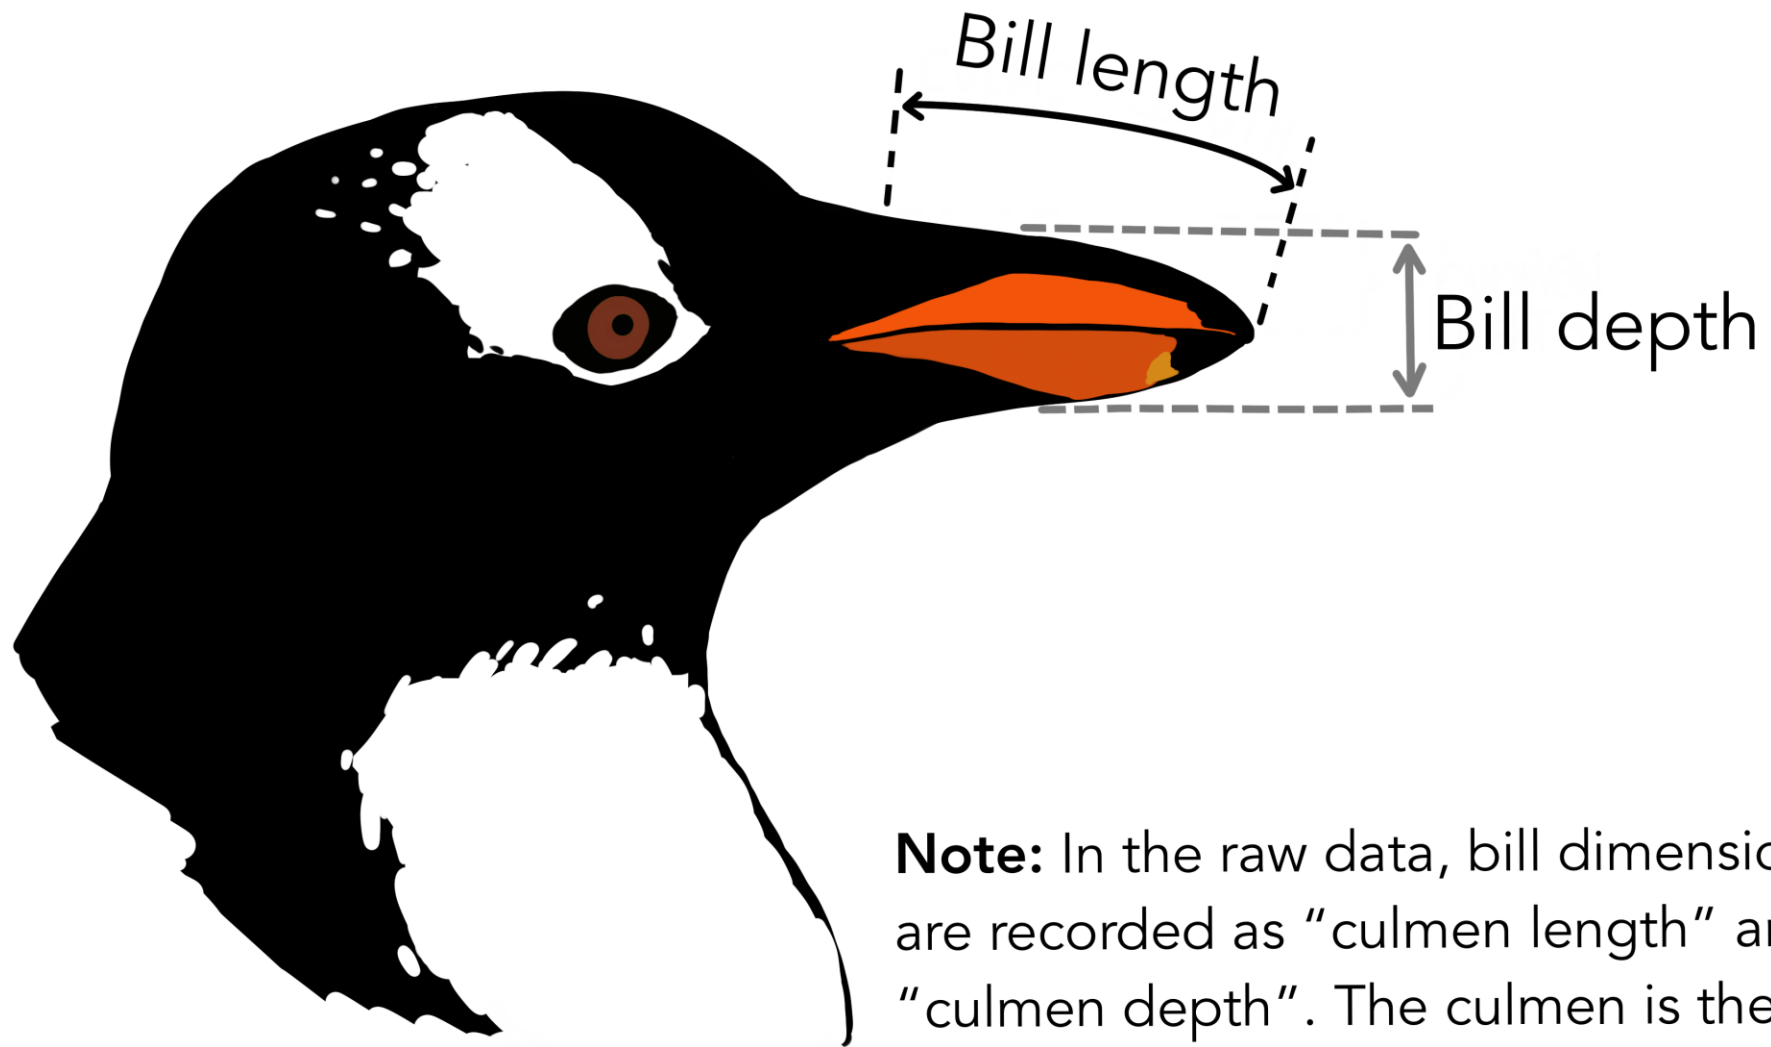

What we are doing this week!

Palmer Penguins

(the R queens' alternative to the iris and cars datasets,
shout out to Allison Horst and co.)

Note: In the raw data, bill dimensions are recorded as "culmen length" and "culmen depth". The culmen is the dorsal ridge atop the bill.

Switch to ze code!
